Exercise 3:

Develop and compare CLI, GUI, and Voice User Interfaces (VUI) for the same task and assess user satisfaction using Python (Tkinter for GUI, Speech Recognition for VUI), Terminal

AIM:

The aim is to develop and compare Command Line Interface (CLI), Graphical User Interface (GUI), and Voice User Interface (VUI) for the same task, and assess user satisfaction using Python (with Tkinter for GUI and Speech Recognition for VUI) and Terminal.

PROCEDURE:

i) CLI (Command Line Interface)

CLI implementation where users can add, view, and remove tasks using the terminal.

```
def add_task(task):
    tasks.append(task)
    print(f"Task '{task}' added.")

def view_tasks():
    if tasks:
        print("Your tasks:")
        for idx, task in enumerate(tasks, 1):
            print(f"{idx}. {task}")
    else:
        print("No tasks to show.")
```

```
def remove task(task number):
    if 0 < task number <= len(tasks):</pre>
        removed task = tasks.pop(task number - 1)
        print(f"Task '{removed task}' removed.")
    else:
        print("Invalid task number.")
def main():
    while True:
        print("\nOptions: 1.Add Task 2.View Tasks 3.Remove
Task 4.Exit")
        choice = input("Enter your choice: ")
        if choice == '1.':
            task = input("Enter task: ")
             add task(task)
        elif choice == '2.':
            view tasks()
        elif choice == '3':
            task number = int(input("Enter task number to
remove: "))
            remove task(task number)
        elif choice == '4':
            print("Exiting...")
            break
        else:
              print("Invalid choice. Please try again.")
if name_== " main ":
    main()
```

OUTPUT:

Enter task: Buy groceries Task 'Buy groceries' added.

Options: 1. Add Task 2. View Tasks 3. Remove Task 4. Exit

Enter your choice: 1

Enter task: Complete homework
Task 'Complete homework' added.

Options: 1. Add Task 2. View Tasks 3. Remove Task 4. Exit

Enter your choice: 2

Your tasks:

1. Buy groceries

2. Complete homework

Options: 1. Add Task 2. View Tasks 3. Remove Task 4. Exit

Enter your choice: 3

Enter task number to remove: 1

Task 'Buy groceries' removed.

Options: 1. Add Task 2. View Tasks 3. Remove Task 4. Exit

Enter your choice: 2

Your tasks:

1. Complete homework

Options: 1. Add Task 2. View Tasks 3. Remove Task 4. Exit

Enter your choice: 4

Exiting...

PS C:\Users\chand\OneDrive\Desktop\python>

ii) GUI (Graphical User Interface)

Tkinter to create a simple GUI for our To-Do List application.

```
import tkinter as tk
from tkinter import messagebox

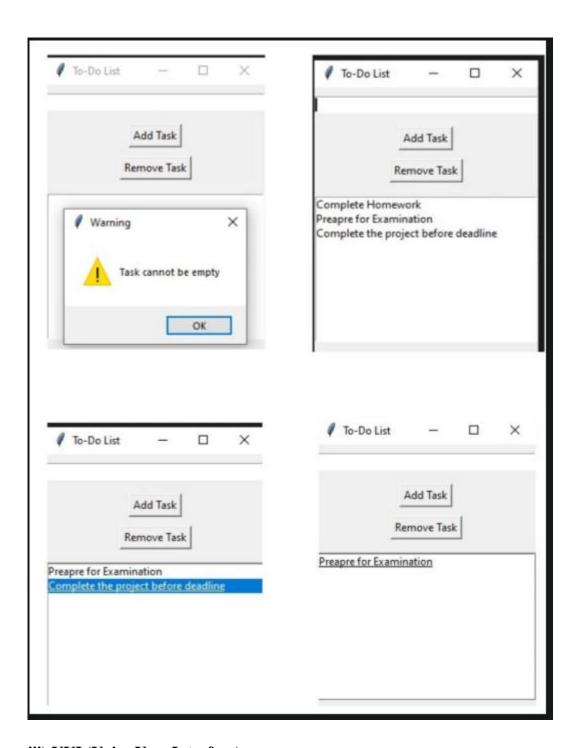

tasks = []

def add_task():
    task = task_entry.get()
    if task:
        tasks.append(task)
        task_entry.delete(0, tk.END)
        update_task_list()
    else:
        messagebox.showwarning("Warning", "Task cannot be empty")

def update_task_list():
    task_list.delete(0, tk.END)
    for task in tasks:
        task list.insert(tk.END, task)
```

```
def remove task():
    selected task index = task list.curselection()
    if selected task index:
        task list.delete(selected task index)
        tasks.pop(selected task index[0])
app = tk.Tk()
app.title("To-Do List")
task entry = tk.Entry(app, width=40)
task entry.pack(pady=10)
add button = tk.Button(app, text="Add Task",
command=add task)
add button.pack(pady=5)
remove button = tk.Button(app, text="Remove Task",
command=remove task)
remove button.pack(pady=5)
task list = tk.Listbox(app, width=40, height=10)
task list.pack(pady=10)
app.mainloop()
```

OUTPUT:

iii) VUI (Voice User Interface)

speech_recognition library for voice input and the pyttsx3 library for text-to-speech output. Make sure you have these libraries installed (pip install SpeechRecognition pyttsx3).

```
import speech_recognition as sr
import pyttsx3
```

```
recognizer = sr.Recognizer()
engine = pyttsx3.init()

def add_task(task):
    tasks.append(task)
    engine.say(f"Task {task} added")
    engine.runAndWait()

def view_tasks():
    if tasks:
        engine.say("Your tasks are")
        for task in tasks:
        engine.say(task)
```

```
else:
        engine.say("No tasks to show")
    engine.runAndWait()
def remove task(task number):
    if 0 < task number <= len(tasks):</pre>
        removed task = tasks.pop(task number - 1)
        engine.say(f"Task {removed task} removed")
    else:
        engine.say("Invalid task number")
    engine.runAndWait()
def recognize speech():
    with sr.Microphone() as source:
        print("Listening...")
        audio = recognizer.listen(source)
        try:
             command = recognizer.recognize google(audio)
             return command
        except sr.UnknownValueError:
             engine.say("Sorry, I did not understand that")
             engine.runAndWait()
             return None
def main():
    while True:
        engine.say("Options: add task, view tasks, remove
task, or exit")
        engine.runAndWait()
        command = recognize speech()
        if not command:
             continue
        if "add task" in command:
             engine.say("What is the task?")
             engine.runAndWait()
             task = recognize speech()
             if task:
```

```
add task(task)
        elif "view tasks" in command:
            view tasks()
        elif "remove task" in command:
               engine.say("Which task number to remove?")
            engine.runAndWait()
            task number = recognize speech()
            if task number:
                  remove_task(int(task_number))
        elif "exit" in command:
            engine.say("Exiting...")
            engine.runAndWait()
            break
        else:
            engine.say("Invalid option. Please try again.")
            engine.runAndWait()
if name_== " main ":
    main()
```
